

Research Topic: Studies have been conducted on strategies for crisis management and COVID-19 restriction improving national and international interventions and reducing the impact of the pandemic on mental and physical health, political changes and economic development. However, these studies conclude that research is needed to identify best practice examples and improve the effectiveness and efficiency of crisis management.

Research question and objectives: In additional studies focusing the comparison of national intervention, researchers note that encouraging international collaboration and cooperation is needed to improve the outcome and increase the quality of life, safety and security globally.

Methodology: Therefore, to ascertain strategies for encouraging collaboration and cooperation, thereby increasing the effectivity and efficiency of the local, national and international of crisis management strategies. I surveyed 20 NGOs and 20 OGs to determine what strategies would provide to highest effectivity and efficiency of the local, national and international of crisis management strategies.

Results: The results of the survey concluded that finding material that International cooperation and cooperating in increasing the effectiveness and efficiency of national and local intervention by adopting international standards to local necessities and encourage international development and the implementation of the global sustainable development goals.

Discussion and Conclusion: In the future, I would like to provide strategies for improving the adoption of international standards to local necessities in various cultural, religious, political and economic environments.
